

光纤复合架空光缆 (OPGW) Optical Fibre Composite Overhead Ground Wire

光纤被包裹在不锈钢管中，管中填充阻水油膏。光纤套管与铝包钢线及铝合金线绞合在一起成缆，并在缆的缝隙中填充防腐蚀油膏。
The fibers are positioned in a jelly filled stainless steel tube. The tubes are filled with a water-resistant filling compound. The tube is stranded with the ACS and AA wires and the gaps are filled with corrosion resistance compound.

敷设方式 Installation

自承式架空 Self-supporting aerial

产品特点 Characteristics

1. 不锈钢管具有较高的机械强度，可有效地保证光缆的使用寿命并具有较高的抗拉伸及抗侧压能力，光纤的余长均匀分布，当弯曲和外力变化时，保证光纤不受力。

The stainless steel tube that houses the fibre has a high tensile strength and a high crush resistance in order to provide an effective protection. The fibre is mechanically decoupled from other component parts of the cable structure in all expected conditions of use. This ensures successful operation during the life expectancy of the cable.

2. OPGW外径和截面小、结构紧凑、重量轻，有效地提高了光缆的抗风荷载的能力

TFO strives for compact and lightweight OPGW designs in order to reduce influences of wind and ice, and to minimize loading of the towers of the power line grid.

3. 使用不锈钢材料作光纤保护单元，并且在不锈钢管中填充油膏，使得光纤单元在线路单相短路时可承受较高的热效应温度

By protecting the optical fibre using a gel filled stainless steel tube which has a high radial thermal resistance, OPGW temperatures up to 300°C can be allowed in a single phase short-circuit situation.

4. 通过精确调整铝包钢线中各种材料的比例，能使OPGW光缆在缩小缆径的同时具有较高的耐张强度。同时，不锈钢管热阻大，当线温升高时有效地保护光纤，因此能承受较高的短路电流

TFO realizes high strength / small diameter OPGW designs by selecting the right type and size for the aluminium cladded steel wires in the center of the structure.

5. 根据对侧地线的技术参数及对于短路电流的要求对OPGW光缆进行合理化配制与设计，以保证线路安全运行

TFO strives for designs with properties that maximally approach those of conventional earth wires in order to meet short-circuit requirements and to ensure secure operation on the power line circuit.

应用范围 Applications

架空地线 Power line

产品标准 Standards

DL/T 832/IEEE1138/IEC60794-4-10
